intel® ONBOARD FLEET SERVICES

The most comprehensive fleet safety solution

From the world leader in automotive safety

Today, up to 25 workdays* are lost per accident involving commercial fleets. Furthermore, penalties and unplanned downtime cost the Indian commercial vehicle fleet industry up to Rs.48,000 Crore* in operational losses every year.

By assisting commercial fleet drivers to be safe and efficient, Indian fleet businesses can eliminate such efficiency losses by up to 50%*.

Our Unique Differentiators

Reliable & Road-Tested Technology

- 125Mn+ vehicles globally with Mobileye Technology

- Tamper proof. AIS 140, ISO TS16949, ARAI EMI/EMC certified

- Accurate, Individual Driver Scores from >15 data inputs

True Integrated, SaaS Solution

- Pay-as-you-use; easy upgrades

- ZERO integration hassles, enterprise class encryption and secure development process

- ~70% more features* than standalone solutions

India Market Focus

- Developed exclusively for Indian fleets

- Enterprise-grade customer support

- Segment specific customizations

Our solutions

Break down data silos to get the most comprehensive view of your fleet business

Road and Cabin Safety

Prevent collisions with active alerts and driver coaching. Patent pending driver scoring module and video telematics help score drivers, coach, and incentivize them.

Video Telematics and On-demand Videos

View alert-triggered live video recordings to correct driver behaviour and improve fleet safety. Use visual evidence to reconstruct events in the case of accidents.

Live Track & Live View

Monitor real-time location of vehicles on a map and effortlessly access live videos of the road and the cabin with just a click.

Driver ID & Trip Tagging

Automatically tags drivers to trips and get the flexibility to manage drivers and trips without the need to assign drivers to vehicles beforehand.

Rev up fleet operations with world-class fleet safety technology

Intel® Onboard Fleet Services is powered by the world's leader in ADAS , Mobileye 8 Connect. The system's AI is based on two decades of stress testing algorithms against real-life driving situations and over 200 million miles of high-resolution video from automaker pre-production testing.
